

Digital Architecture: Concerns in pedagogical approach

29 February 2020

Facilitated by Dr. Mia A Tedjosaputro

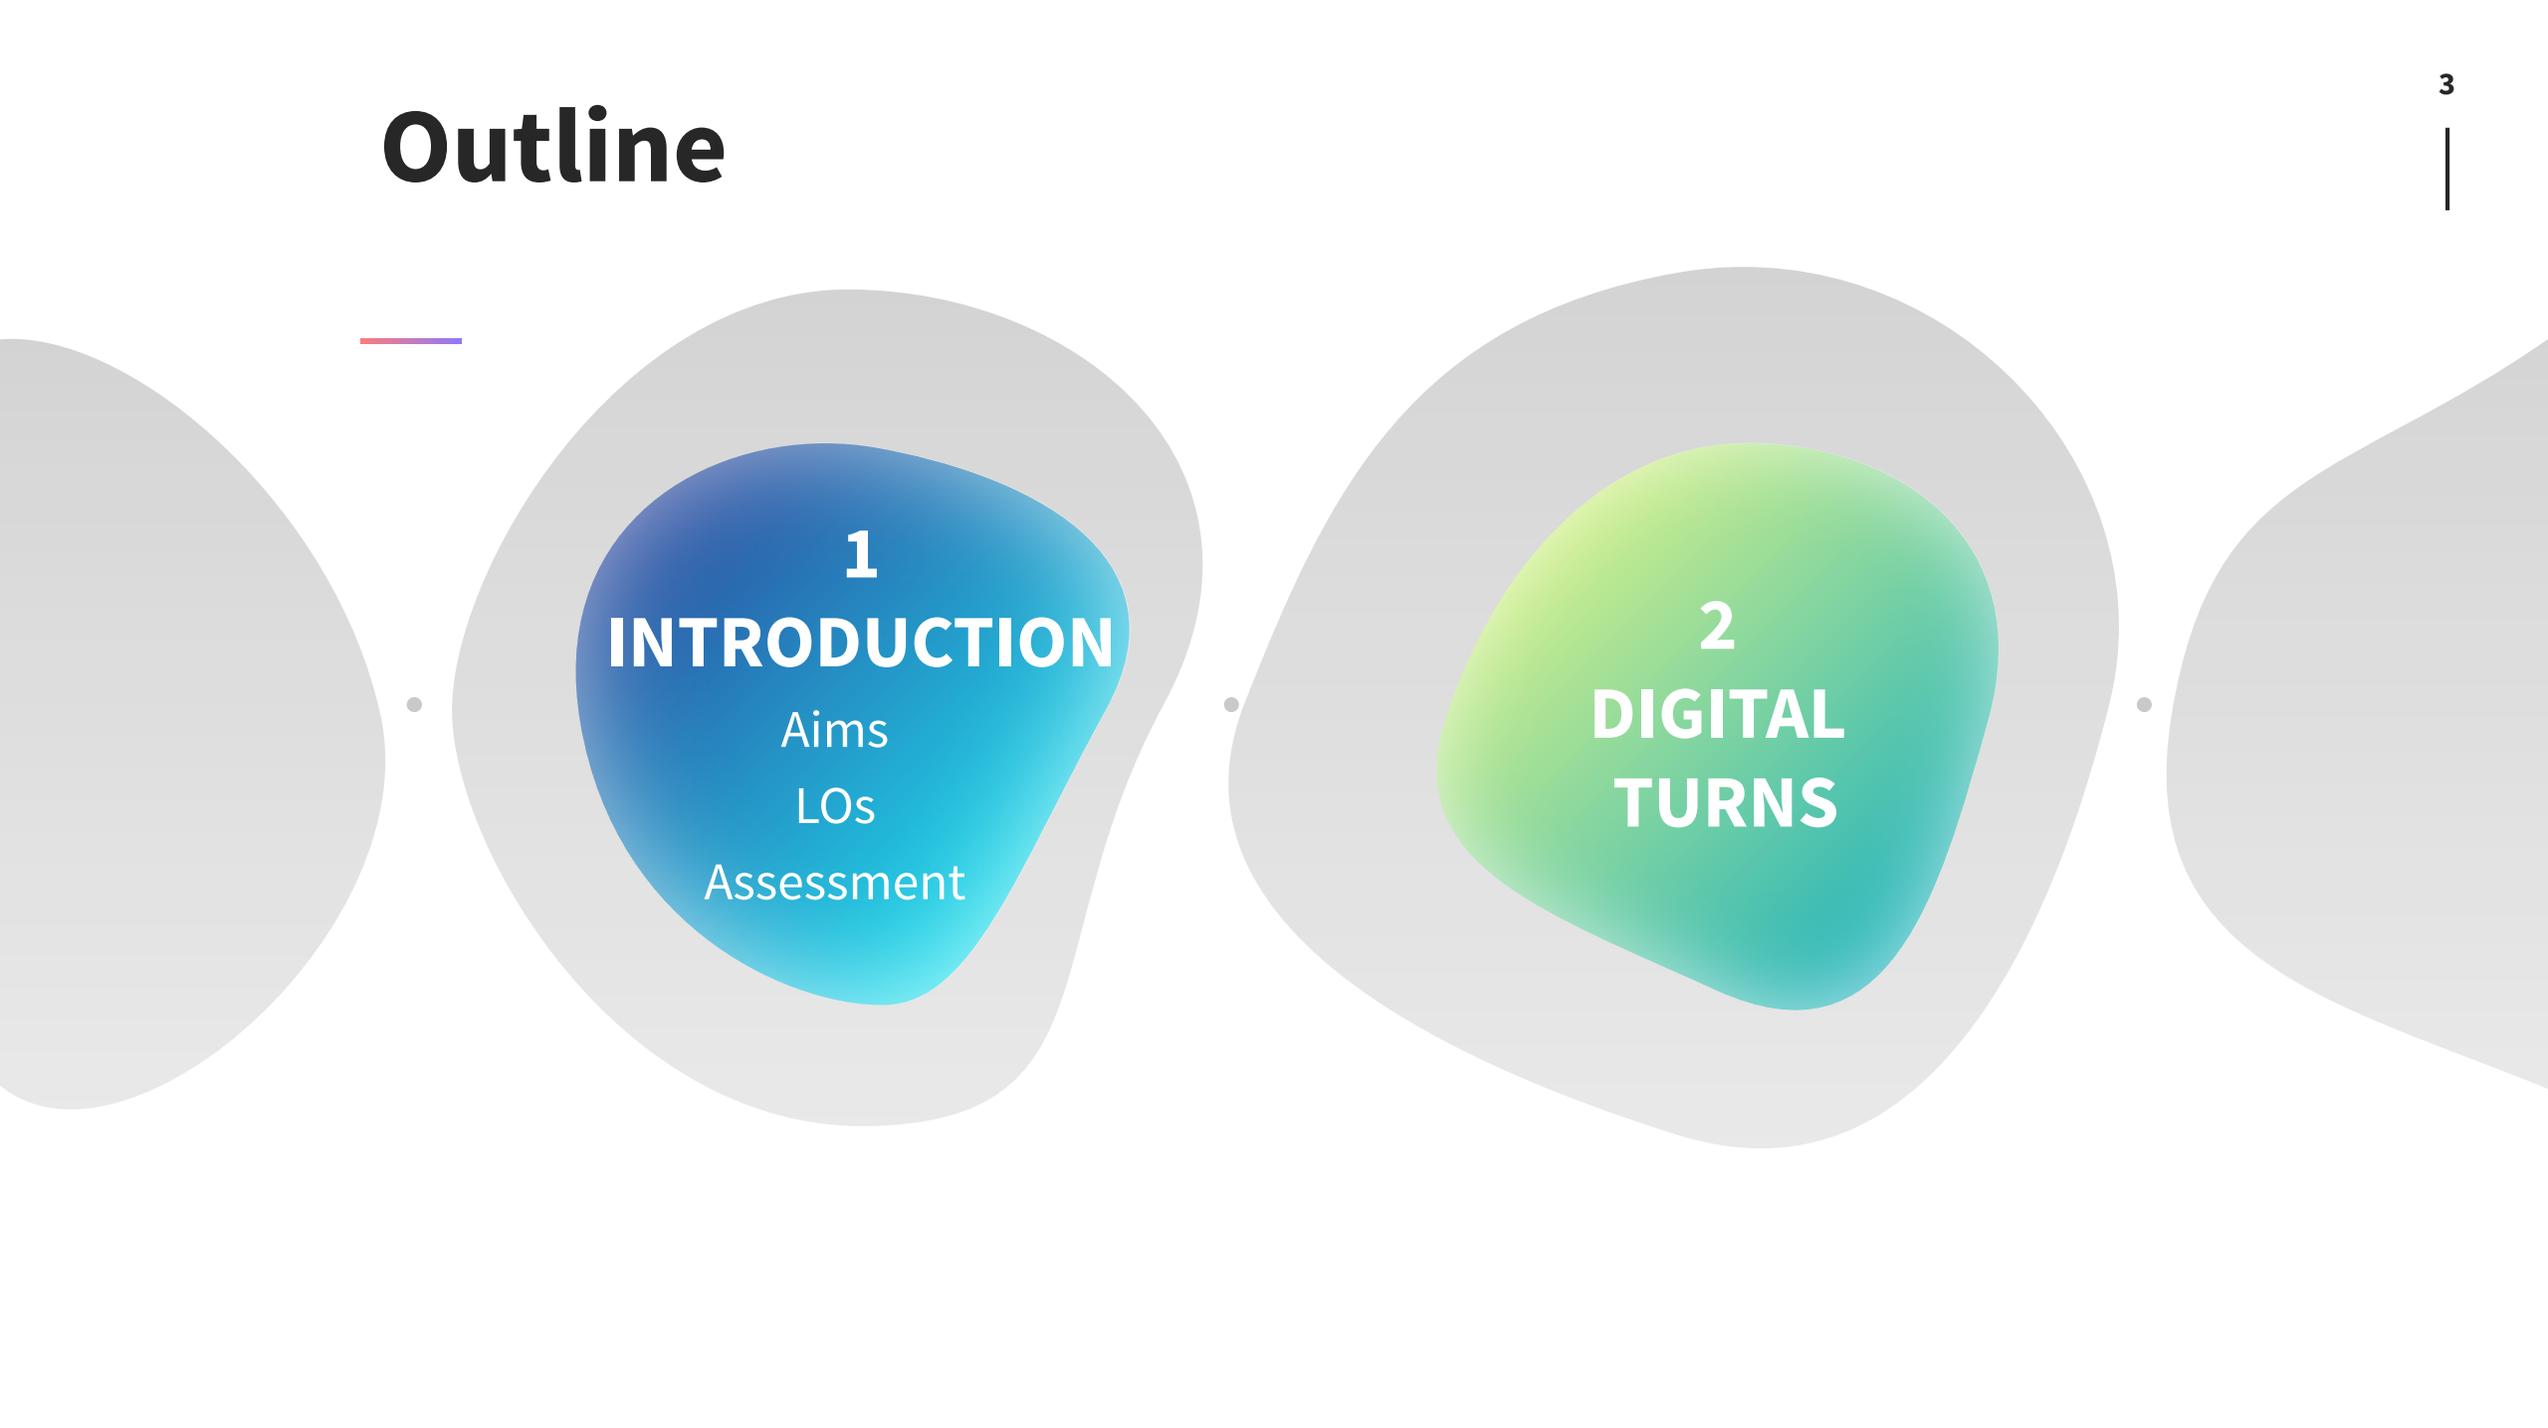

Digital Architecture?

Outline

1
INTRODUCTION

Aims
LOs
Assessment

2
**DIGITAL
TURNS**

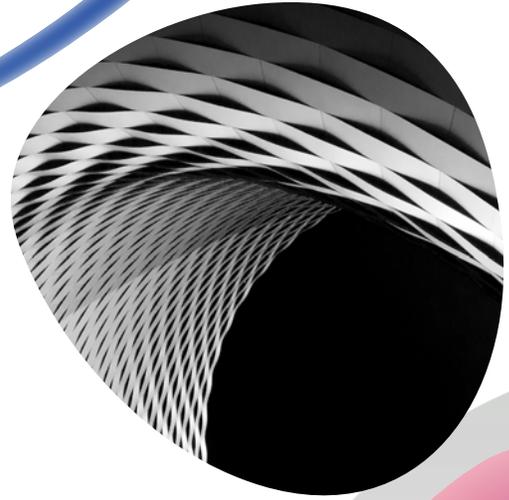

Aims and objectives

- To elicit students' **current level of knowledge** about digital architecture through brainstorming
- To introduce students to **digital turns** in architecture
- To introduce **important concepts** concerning architecture pedagogy in response to the digital turns

Learning outcomes

Students will be able to..

- 01** Comprehend digital turns in architecture
—
- 02** Name the three concerns related to digital architecture pedagogical approach
—
- 03** Discuss based on their background knowledge and short input text

**Formative
assessment:**

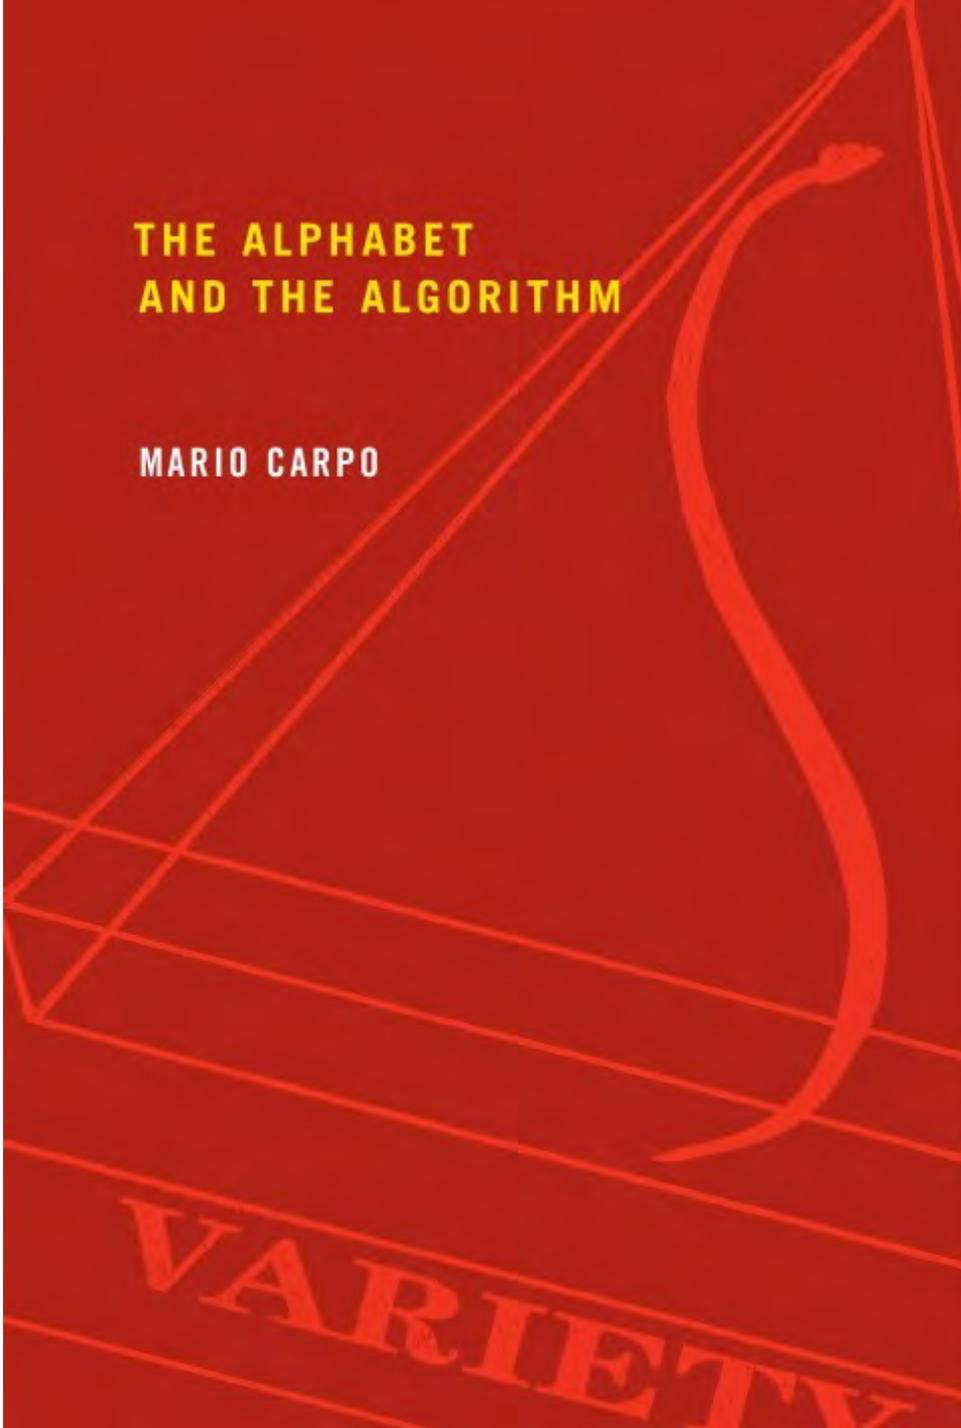

**In forms of quiz
and peer
evaluation**

LO-01 Digital turns

LO-02 Three concerns

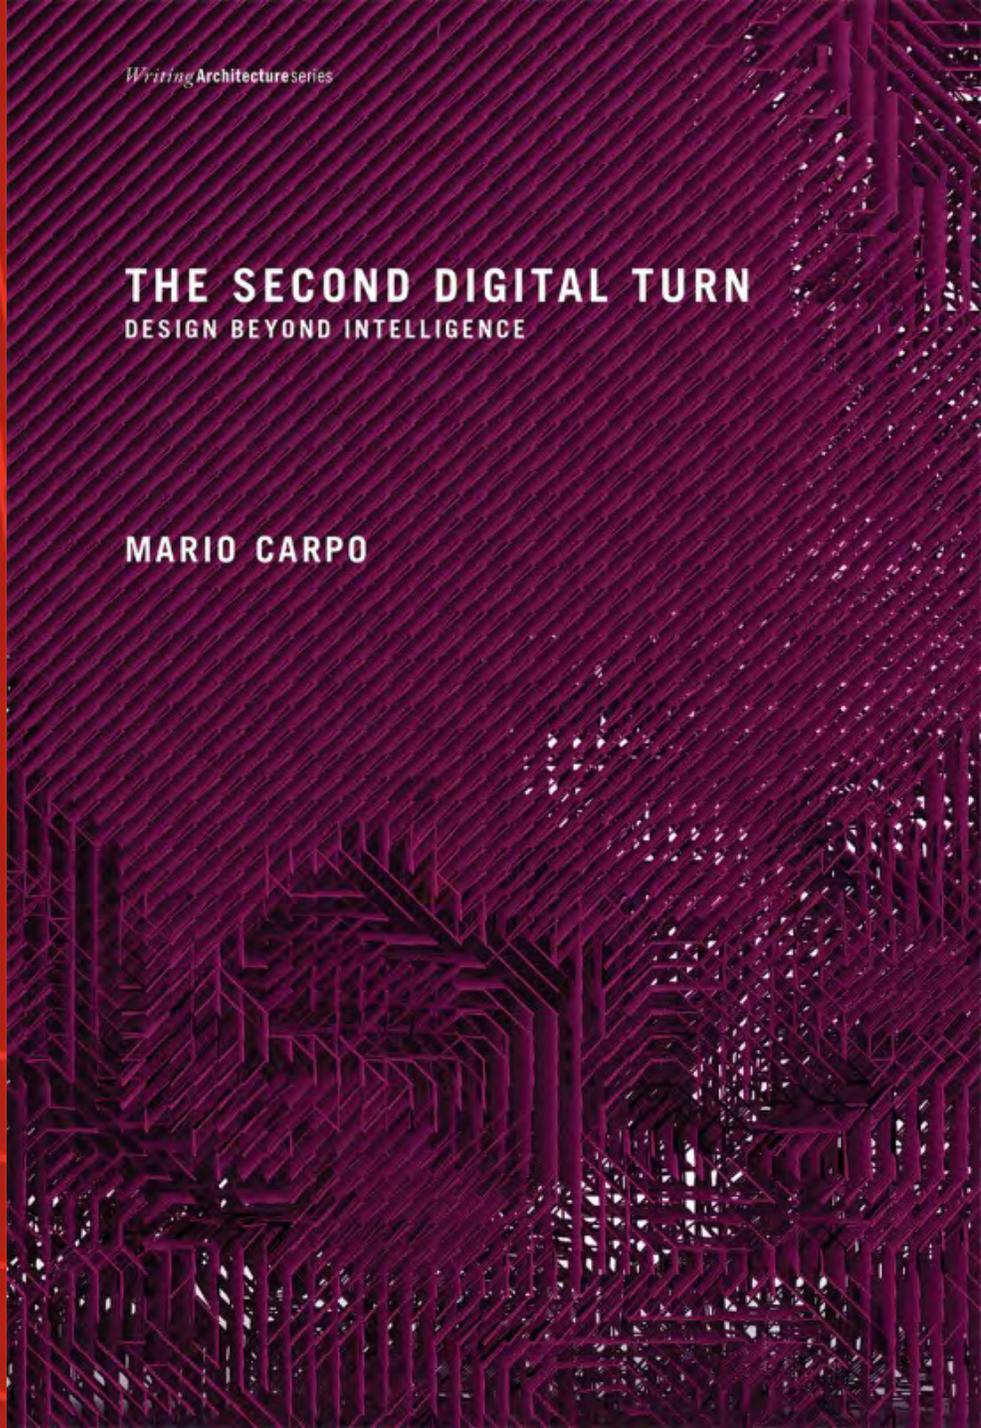

LO-03 Discussion

**THE ALPHABET
AND THE ALGORITHM**

Carpo, M. 2017. The Second Digital Turn: Design Beyond Intelligence, MIT Press.

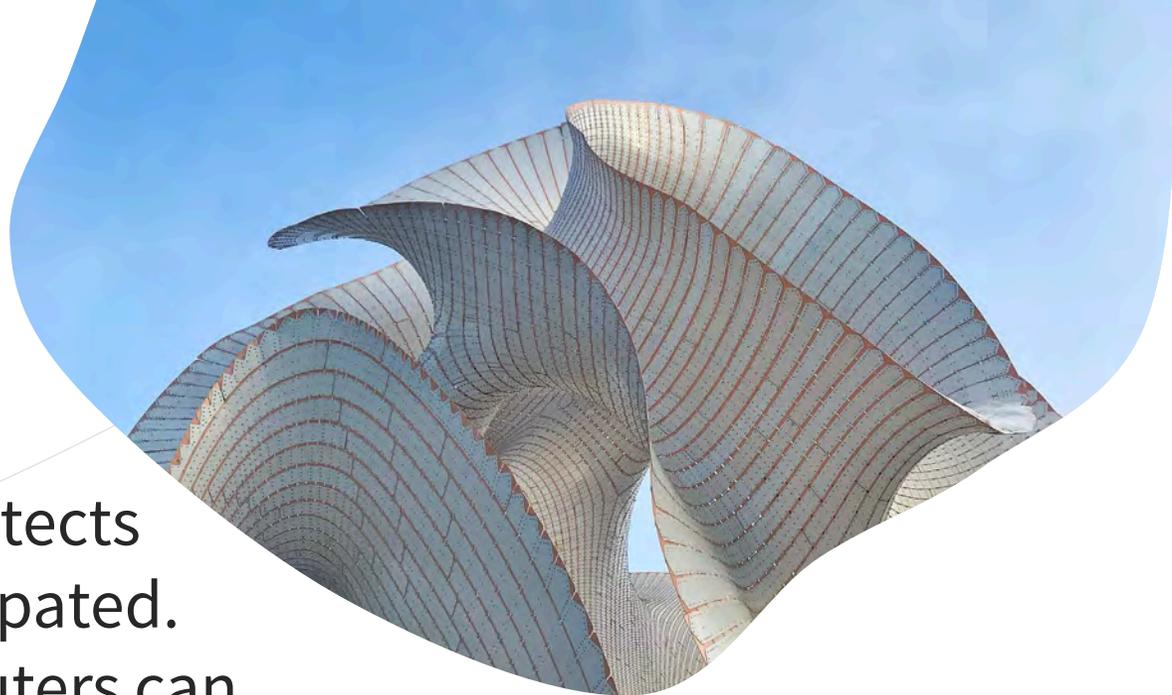

First digital turn

- Circa 1990, renowned architects **embraced digital change.**
- From identical copies to customised or non-standardised products.
- **First generation** of digital design and fabrication.
- Digital fabrication does not use mechanical matrices, casts, stamps or moulds.
- Making digital copies will not reduce the cost.

Second digital turn

- Separation of the ways architects **think, draw and make** dissipated.
- Non-humanistic way: computers can work faster.
- New taxonomy of digital architecture.
- Oxman (2008): digital architecture as a **challenge in design pedagogy**.
- Oxman and Oxman (2014), an edited book: **theoretical foundations** of this new architecture.

Oxman, Rivka (2008). Digital architecture as a challenge for design pedagogy: theory, knowledge, models and medium. *Design Studies*, 29, 99-120.

CONCERNS IN DIGITAL TURNS IN ARCHITECTURE

Mia A. Tedjosaputro

Peer-reviewed conference paper

Concerning digital design in architectural pedagogy

mia@miatedjosaputro.com

Abstract. The emerging field of digital design in architecture has changed the way designers think and the way it should be taught. This paper looks at six design educational exercises which have adopted digital tools using various systems. Discussions are rooted in digital design cognition, digital design eco-system and pedagogy. This paper attempts to observe the change of ways of making within these themes using design cognition lens. It is proposed that digital design tool affordances is a pertinent concept to support this emerging field, both pedagogically and with regard to software development. It is also suggested that the digital eco-system framework need to include the dialogue between analogue and digital design tools.

Keywords: Digital design cognition, pedagogical approach, design tools affordances

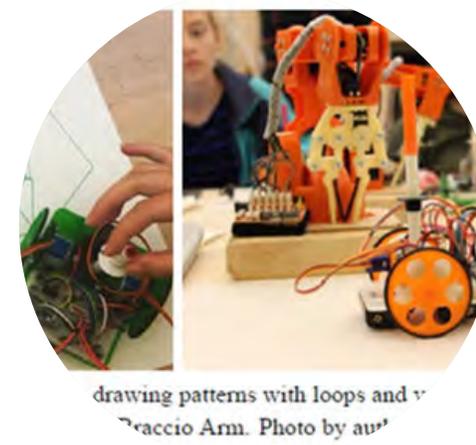

Research methodology: Six design education practices

Jigsaw reading

STEP 1 **Group allocation**

STEP 2 **Read input texts individually**

STEP 3 **Summarise text to group members**

STEP 4 **Short quiz (see guiding Qs)**

STEP 5 **Evaluate each others' performance**

Concerns are classified into three categories

01

Digital design cognition

02

Digital design eco-system

03

Digital design pedagogy

QUIZ

Guiding questions

What was the main point?

What was most interesting detail?

Was there anything in the reading that you disagree with? Why?

Peer evaluation

How did your peer do?

Likert scale

Question not answered Question answered OK but can be improved Question answered comprehensively

Group 1, Digital Design Cognition

Group 2, Digital Design Eco-system

Group 3, Digital Design Pedagogy

Re-thinking architectural pedagogy

Knowing when and why **digital mass customisation** is needed.
Celebrating **craftmanship**.
Re-learning from the “**local wisdom**”.
Architects in the middle during of the act of: notating, representing and fabricating.
Utilising **technological advances** to full potential.

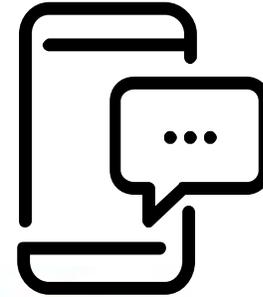

Re-iterated aims and objectives

- To elicit students' **current level of knowledge** about digital architecture through brainstorming
- To introduce students to **digital turns** in architecture
- To introduce **important concepts** concerning architecture pedagogy in response to the digital turns

Homework

CAADRIA

01

Digital design cognition

- The shift is the **relational value** between designers and design tools.
- Proposing the use of *embodied cognition** lens in design studies.
- Mind-body-design environment.
- “What is the dialogue between designers and (digital) design tools in the design ideation process?”
- Design tool affordances.

* Tedjosaputro, M. A. & Shih, Y.-T. (2019). Perceiving Design Processes as Embodied Experience. Research into Design for a Connected World. Springer.

02

Digital design eco-system

- Digital tools do not work in isolation.
- **The eco-system** hosts a variety of design software in application.
- **Dynamic ecosystem** is proposed by case study #7.
- Selection of tools entails strength and weaknesses of **designers** and **tools** (#6)
- **Interoperability** challenges (#5).
- **Design fixation** challenges.

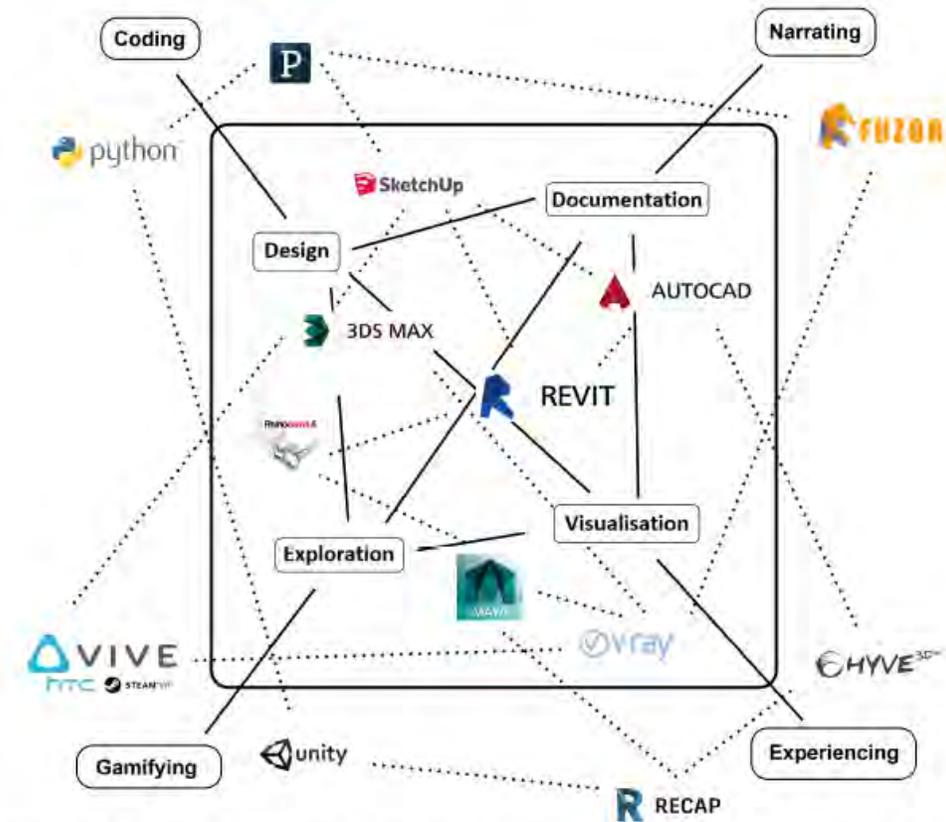

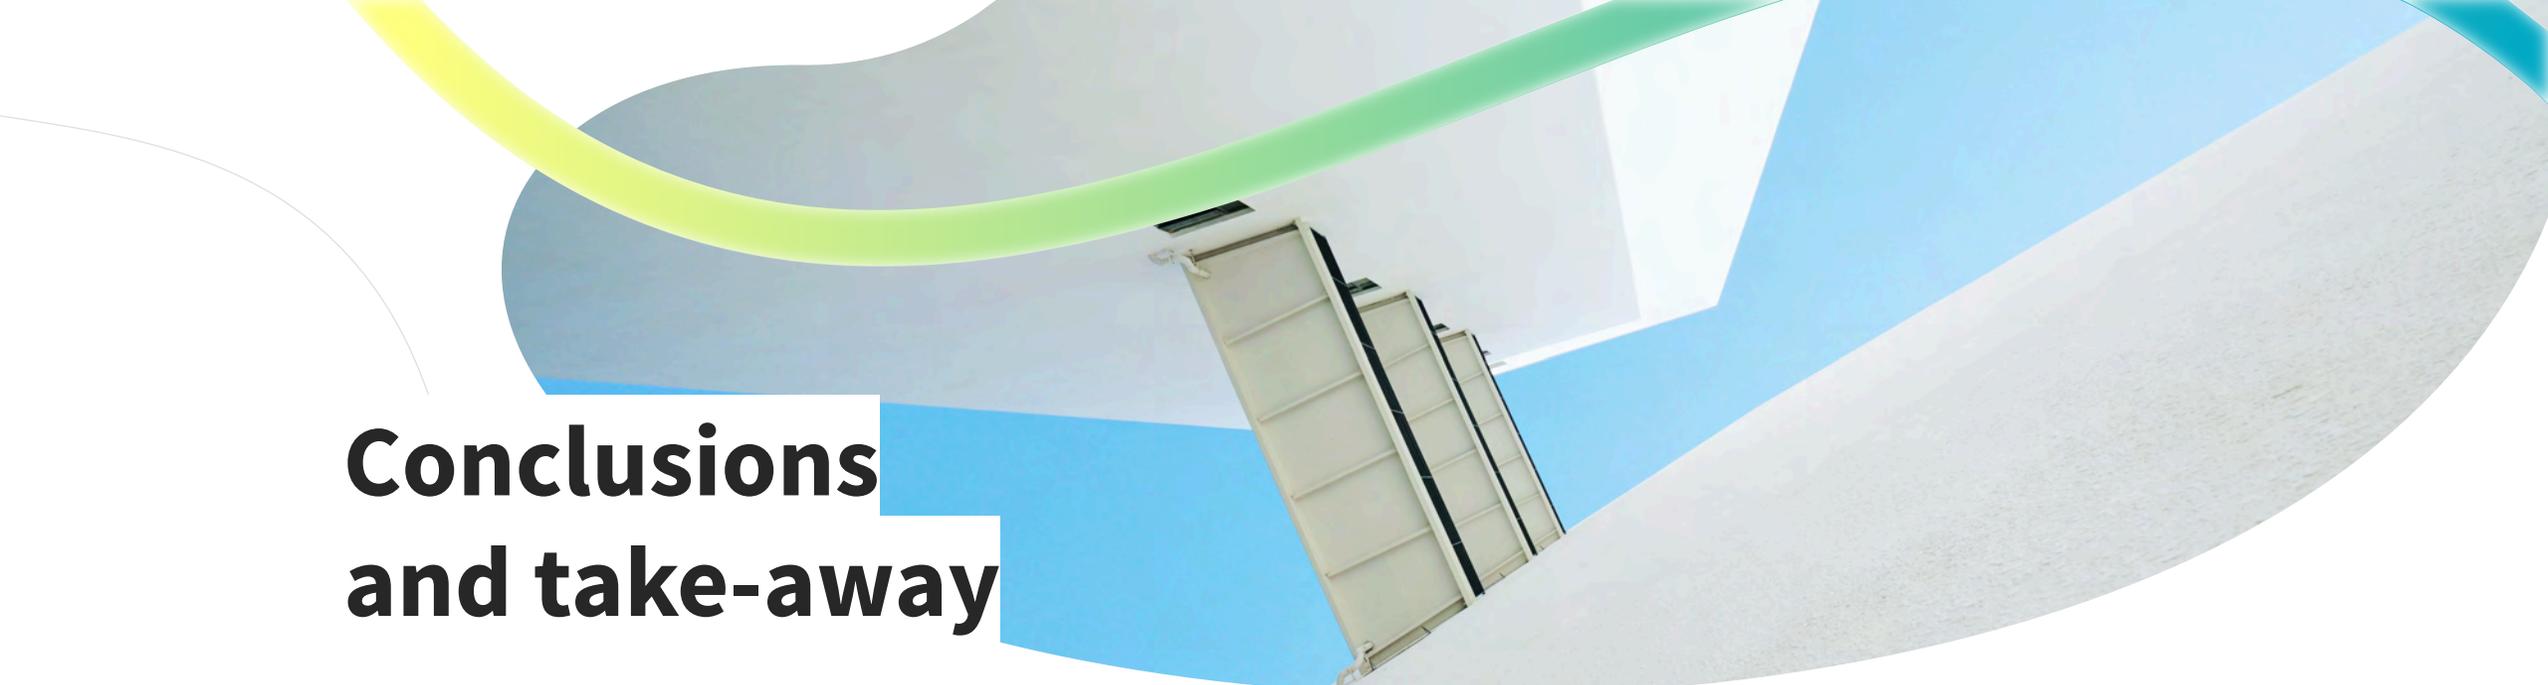

Figure 4. Dynamic Eco-system of the design process expanded from the conventional design process.

03

Digital design pedagogy

- Specialist software requires specialist knowledge.
- **Potential problems:** design fixation and lack of understanding of design tool affordances.
- New design skills are shaped.
- **Scripting** in architecture pedagogy?
- Suggestions: subtle **transitions** between analogue and digital design pedagogy.

Conclusions and take-away

01

Design behaviour has shifted due to the change of relational value between designers and digital design tools.

02

From CAD (Computer Aided Design) to computational design, as a new discourse.
